Rodion Myshalov

Golang/PHP Developer

About Me I am a motivated Backend Engineer with 5+ years of experience. I constantly develop both my soft and hard skills and work on improving my technical expertise every day. I have experience across various fields and actively use AI tools to boost efficiency and learn new things. I also have management and mentoring experience. My main area of focus is Backend Development, but I also have commercial Frontend development experience.

I began my career as a Backend Developer in 2020 while in my third year at university. My first role was as a PHP Developer in an outsourcing company. Later, I decided to try myself as a Fullstack Developer (Scala/React). After that, I returned to a PHP Developer role. Since then, I've been learning and writing Go for my personal projects. Currently, I am interested in positions involving pure Golang or Golang + PHP.

I prefer my software to be clean, scalable, and readable. I've written a lot of code over the years and made many mistakes, which helped me understand how to build effective backend systems. I am a team player who aims to deliver features to production as quickly as possible. Whenever I encounter an issue, I prefer to discuss it openly with the team.

Languages

English
B2

Russian
Native

Education

2018 - 2022, Far Eastern Federal University
Bachelors Degree in Mathematics and Computer Science

Interests

Professional
Web Development, Computer Science, software architecture, scripts, messenger bots, AI tools

Personal
Music production, video games, social networks activity, sports, streaming

Experience

Oct 2019 - Aug 2022, *PHP Developer*, Taptima

Stack:

- PHP, Symfony, Laravel
- MySQL
- REST, GraphQL
- Docker, Cron
- RabbitMQ
- Redis
- Swagger, OpenAPI
- System design
- Tech team leading

Taptima is an outsourcing company based in Vladivostok that provides SaaS systems for various business needs. I have built multiple backend engines for several companies, for example:

- **Gorky's Theater**: a new website with an up-to-date show schedule and a new ticket sales system — `https://gorkytheater.ru`. I built the database structure, GraphQL API for the frontend, integration with the ticketing system, and a caching system for shows.
- **Illuzion**: physical kiosks for buying and printing tickets (and bar products) for a cinema. I built the database structure, REST API for the frontend, integration with the ticketing system, and a caching system for shows. I was also the Team Lead for the tech team at that time. I used to go to the cinema building to deploy/build the kiosks and observe how users interacted with them.
- **quan2um**: referral and bonus programs for a crypto exchange service — `https://quan2um.com`. On this project, I led a team of three: a manager, myself as the backend developer, and a frontend developer. The system requirements were provided by the exchange manager, and I built the REST API for it.
- **FitClassHub**: a CRM system for sports trainers. I built the database structure and the REST API for the frontend.
- **HTReviews**: ratings for hookah tobaccos — `https://htreviews.org`. Our task was to migrate from an old WordPress version with a single database table to a new system built with Symfony. I was assigned to lead the junior developers on this project. My main responsibilities were code review and helping the team.

Aug 2022 - June 2023, *Fullstack Developer*, SOHO.LMS

Stack:

- Typescript, React, React Native
- Scala, Slick, Sangria
- PostgreSQL
- REST, GraphQL, gRPC
- Docker

SOHO.LMS is an online education platform created by the founders of the SOHO.MBA business school. The system has a complex architecture with several frontend applications (master, student, admin, CRM, CMS, facade) and a main backend application that identifies which client application each request originates from. I worked across the entire system and later was assigned to develop the React Native application for students. Initially, I mainly handled frontend tasks with occasional backend adjustments.

Sep 2023 - Dec 2025, *PHP/Golang Developer*, 1XBET

Stack:

- PHP, Symfony
- MySQL
- Golang
- REST
- Docker, Kubernetes, Cron
- RabbitMQ, Kafka
- Redis
- Swagger, OpenAPI

My work started with a legacy monolithic PHP-based CMS, where I added new features and refactored old modules. Later, our team focused on extracting parts of the system into microservices. After that, I concentrated on the Go microservice Licenses, which provides an internal REST API for the frontend and supplies data to other services via the Kafka inter-service message broker. The service also receives authorization data and reference information (static datasets like "locations") via gRPC. I designed and implemented all components of this microservice and brought it to production. I also made a significant contribution to the shared packages used by other microservices and participated in the development of several additional services.

Software Development Skills

Programming

- Golang
- Scala
- Typescript
- PHP
- Javascript

Databases

- MySQL
- PostgreSQL
- MongoDB
- Redis

API

- REST
- GraphQL
- gRPC
- Swagger
- OpenAPI

Frameworks

- Symfony
- Laravel
- React
- React Native

Infrastructure

- Docker
- Kubernetes
- Gitlab CI/CD
- Cron

Message brokers

- RabbitMQ

Monitoring

- Sentry
- Grafana
- Kibana

AI

- ChatGPT
- Grok
- Gemini
- Cursor
- Qoder
